

EasyPrime

Polyurethane-acrylate water-based primer for roller and trowel application for wooden floors.

Emissions

	Approval number Z-157.10-19	According to DIBt (German institute for building technology)
	Harmless according to expert evaluation of VOC, ingredients and odour	According to RTS (Building Information Foundation Finland)
	A+	According to French VOC classification

Technical evaluation

2004/42/CE	EU limit value for this product (cat. A/i): 140 g/l (2010). , This product contains max. 63 g/l VOC.
GISCODE	W3+ (Water-thinnable surface treatment agents, solvents up to 15%, N-methylpyrrolidone free)

Glossar

DIBt

For reasons of health protection, the German Institute for Building Technology (DIBt) requires a general building supervisory approval for all building products used for the treatment and bonding of parquet on site. Certified building materials are marked with the Ü symbol. This obligation to obtain approval has been in force in Germany since 1 January 2011. In order to obtain approval, compliance with emission limits must be proven and the formulations must be disclosed to the DIBt. www.dibt.de

M1

The M 1 classification is part of the voluntary Finnish indoor climate classification system. It is published by the Finnish Association for Indoor Air and Climate (FISIAQ).

DGALN

The French VOC classification classifies construction products that are permanently processed indoors according to their emissions into emission classes A+, A, B or C, where A+ stands for the best and C for the worst emission class. These construction products have had to be labelled in France since 2012.

2004/42/CE

The "Decopaint-Directive" is a limitation of volatile organic compounds (VOC)* proclaimed by the EU due to the use of organic solvents in certain paints and varnishes.

GISCODE

The term GISCODE stands for Hazardous Substance Information System Code and was developed by the BG Bau (Employer's Liability Insurance Association for the Construction Industry). It is a labelling system in which products with comparable health hazards are grouped together in product groups. The coding consists of a letter/number combination that uniquely assigns the product to a product group. To obtain specific product information, a product group can be selected on the GISBAU website (= Hazardous Substance Information System of the BG Bau) and detailed hazardous substance information can be found in the appropriate table.
